

Complimentary Chiropractic Screening for FIP residents

What is Chiropractic?

Chiropractic is a natural, preventative and rehabilitative health care. It concentrates on educating and teaching the patient to become proactive and responsible for their own health, spiritually, mentally, and physically, with chiropractic and with exercise and nutrition.

The primary focus of chiropractic is to remove the nerve interferences in the nervous system to stimulate your own innate (internal) intelligence through the detection, reduction, and correction of spinal misalignments (bones out of place) in the spine to promote natural healing.

Have you been experiencing mid- and low-back pain, muscular skeletal problems, headaches, neck pain etc., with a host of other conditions that are causing you to not feel as well as you would like? You may be experiencing health problems, fatigue, stomach problems due to improper digestive function, these problems are due to the bones being out of line in the spine, causing interferences in the nervous system. Or, you just might want to start chiropractic care to maintain your good health.
